Resolving the CLSPost Error Message

You can resolve the CLS Post error message by reindexing database files.

If you are receiving a CLSPost error message while running a file transfer using FTS, follow the below. This error occurs on the Office Main.

A re-index of the database files needs to occur.

1. Open ProFiler.
2. Click **Processing Programs**.
3. Click **System Utilities**.
4. Click **Re-Index Database Files**. The database files will re-index.
5. After it finishes, try running a file transfer again. This time it will run without the CLSPost error message.
